

One record, separately inspectable evidence and spatial support

The display anchor enables rendering; the polygons state the spatial support warranted by the current match.

ARCHIVE RECORD 2410032 · CATEGORY 才二 · 岐阜県 · SUPPORT CANDIDATE 美濃市

Archive summary → rule-based extraction. The exact source excerpt is omitted pending confirmation of source-text terms.

SEPARATE EVIDENCE CHANNELS

Candidate toponyms

美濃, 今須

Place descriptions

はずれ, 墓, 寺, 家, 蔵
供養, 霊, 仏, 夜, 村人
僧

Human conditions

村人, 僧, 夜

Derived interfaces

domestic threshold
mortuary boundary

Support basis

Unique present-day
municipality-name match
within the prefecture;
current GADM 4.1 polygon.

Ambiguity retained

Anchor is display-only;
historical-name, extraction,
and municipality-match
precision remain unvalidated.

SUPPORT AREAS AND DISPLAY ANCHOR

A Prefecture + municipality B Municipality + anchor

Refinement changes the support geometry. It does not turn the representative point into a narrated-event coordinate.

Present-day administrative boundaries are support proxies for potentially historical records.
